WHY DOES A BUSINESS NEED A WEBSITE?

Having a website nowadays is the equivalent of having business cards and it just sounds odd if you tell someone that you don't have a web presence, even if it's just a single web page with contact information. Think of it as a welcome mat to your business, introducing you and your staff to the buying public before they ever walk through your door. A professionally designed website will create an opportunity for you to explain exactly what you do and sell, where you're located and how consumers can contact you. For small businesses that rely on a local customer base, your website is an invaluable source of additional customer inquiries, as it creates an online lead generation system, growing your organization.

RMF Technologies provides professional website design services within a small businesses' budget.

Most do-it-yourself website companies will charge the average customer a little over \$40 per month, for a website that you have to design. For the same amount of money, you can have a professionally designed website created by RMF Technologies, including free web mail access and personalized business email addresses.

Keeping the budget of the small business owner in mind, while delivering professional website services, sets RMF Technologies apart from the competition. A self designed website brings very little benefit compared to a professionally and artistically designed web presence. Putting such a minimal effort in to the design of your website makes the company look small. No matter the size of your business, nobody will forget a professional online presence.

RMF Technologies can provide a professionally designed website package for just \$1.37 a day, with no monthly hidden fees.

Business owners, small or big, that don't invest in website or don't update their existing website are missing out. For companies considering a website - go for it. You have nothing to lose and a lot to gain!
